

Mod. VC/P

$Q = 150 \div 5500 \text{ m}^3/\text{h}$

$Q = 0.04 \div 1.5 \text{ m}^3/\text{s}$

$p_t = 100 \div 2250 \text{ mmH}_2\text{O}$

$p_t = 1000 \div 22000 \text{ Pa}$

Campo di lavoro

Portate basse. Pressioni alte.

Tipo di pala

Curva, positiva, vedi pag. 2.3.

Applicazioni

Per trasporto pneumatico, polveri, essicazione, pressurizzazione. Adatto per impieghi nel campo industriale delle fonderie, pastifici, forni, chimico.

Esecuzioni costruttive standard

Es.1-Es.4-Es.5-Es.8-Es.9-Es.12, vedi pag. 2.5 - 2.6.

Temperature del fluido standard

-10÷+60°C. Per altre temperature vedi da pag. 1.12 a pag. 1.15.

Tipo di costruzione

Ventilatore in lamiera di Fe360, girante in Fe360 equilibrata staticamente e dinamicamente. Per altri materiali vedi da pag. 1.12 a pag. 1.15.

Dati di funzionamento

Condizioni dell'aria all'aspirazione T=20°C, 0m.s.l.m. e p=1.205 kg/m³.

Rumorosità

Espressa in potenza sonora L_wA [dB(A)] rilevata in campo libero con ventilatore canalizzato, vedi da pag. 1.43 a pag. 1.49.

Orientamenti

N°8 RD (rotazione oraria vista lato trasmissione) e N°8 LG. Ventilatore in versione imbullonata, orientabile, dalla grandezza 500 alla 630, con supporto anteriore e quindi non orientabile dalla grandezza 710 a trasmissione, sempre orientabile nei ventilatori direttamente accoppiati senza supporto anteriore. Vedi pag. 2.7.

Costruzioni speciali

Vedi da pag. 2.20 a pag. 2.30.

Avviamento ventilatore

I ventilatori serie VC/P devono necessariamente essere avviati con aspirazione completamente chiusa.

Verificare con i dati del costruttore del motore elettrico l'effettivo numero di avviamenti/ora che è in grado di sopportare il motore; salvo diverse indicazioni considerare un massimo di un avviamento/ora.

In caso sia prevista la necessità di avviare il ventilatore più frequentemente è possibile ovviare installando un motore di taglia superiore. In avviamento la corrente di spunto può arrivare fino a 7 volte la corrente nominale, dimensionare in maniera opportuna la componentistica elettrica.

Classi giranti

La seguente tabella fa riferimento a condizioni di lavoro standard. In condizioni di esercizio gravose si consiglia di contattare il servizio clienti di MORO per conoscere la tipologia di girante più idonea.

■ Domaine de travail: Faibles débits. Hautes pressions.

Type d'ailette: Courbée, positive, voir page 2.3.

Applications: Pour transport pneumatique, poussières, séchage, pressurisation. Convient à l'emploi dans le domaine industriel des fonderies, fabriques de pâtes, fours, chimique.

Configurations de constructions standard: Ex.1- Ex.4- Ex.5- Ex.8- Ex.9- Ex.12, voir pages 2.5 - 2.6.

Températures du fluide standard: -10÷+60°C. Pour d'autres températures voir pages 1.12-1.15.

Type de fabrication: Ventilateur en tôle de Fe360, turbine en Fe360 équilibrée statiquement et dynamiquement. Pour d'autres matériaux, voir pages 1.12 to 1.15.

Données de fonctionnement: Conditions de l'air à l'aspiration T=20°C, 0 m asl et p=1.205 kg/m³.

Niveau sonore: Exprimé en puissance sonore L_wA [dB(A)], relevé à l'air libre avec un ventilateur canalisé, voir pages 1.43 - 1.49.

Orientations: 8 RD (rotation dans le sens des aiguilles d'une montre côté transmission) et 8 LG. Ventilateur en version boulonnée orientable pour les tailles 500-630, avec un support avant et donc non orientabile de la grandezza 710 à transmission, toujours orientabile dans les ventilatori direttamente accoppiati sans support avant. Voir page 2.7.

Fabrications spéciales: Voir pages 2.20-2.30.

Mise en marche du ventilateur: Les ventilateurs série VC/P doivent nécessairement être mis en marche avec une aspiration totalement fermée.

Vérifier le nombre réel de mises en marche/heure avec les données du constructeur du moteur électrique, que le moteur est en mesure de supporter.

Sauf indications contraires, considérer un maximum de mise en marche/heure.

S'il est prévu que le ventilateur doive être mis en marche plus fréquemment, on peut remédier en installant un moteur de dimension supérieure.

A la mise en marche, le courant de démarrage peut arriver à 7 fois le courant nominal, prévoir une installation électrique de dimension adaptée à cet effet.

Classes de turbines: Le tableau ci-dessus fait référence aux conditions de travail normali, en conditions de travail pénible, on préconise de contacter le service clientèle de MORO pour connaître le type de turbine le plus adapté.

GRANDEZZA VENTILATORE • Grandeur • Size • Größe • Tamaño	RPM MASSIMO		
	CLASSE I	CLASSE II	CLASSE III

■ Field of operation: Low flow rates. High pressures.

Blade type: Curve, positive, see pg. 2.3.

Applications: For pneumatic transport, dust, drying, pressurization. Suitable for applications in industrial fields like foundries, pasta factories, bakeries, chemicals.

Standard constructional arrangements: Arr.1 - Arr.4 - Arr.5 - Arr.8 - Arr.9 - Arr.12, see pgs. 2.5 - 2.6.

Standard fluid temperatures: -10÷+60°C. For other temperatures see pgs. 1.12 to 1.15.

Type of construction: Fan in Fe360 plate, impeller in Fe360 statically and dynamically balanced. For other materials see pgs. 1.12 to 1.15.

Operating specifications: Condition of inlet air T=20°C, 0 m above sea level and p=1.205 kg/m³.

Noise level: Expressed as sound power L_wA [dB(A)] measured in free field with ducted fan, see pgs. 1.43 to 1.49.

Orientations: No.8 RD (clockwise viewed from transmission side) and No.8 LG. Fan in bolted orientable version for sizes 500-630, with front support and so not orientable for sizes 710 and above with transmission drive, always orientable for directly coupled fans without front support. See pg. 2.7.

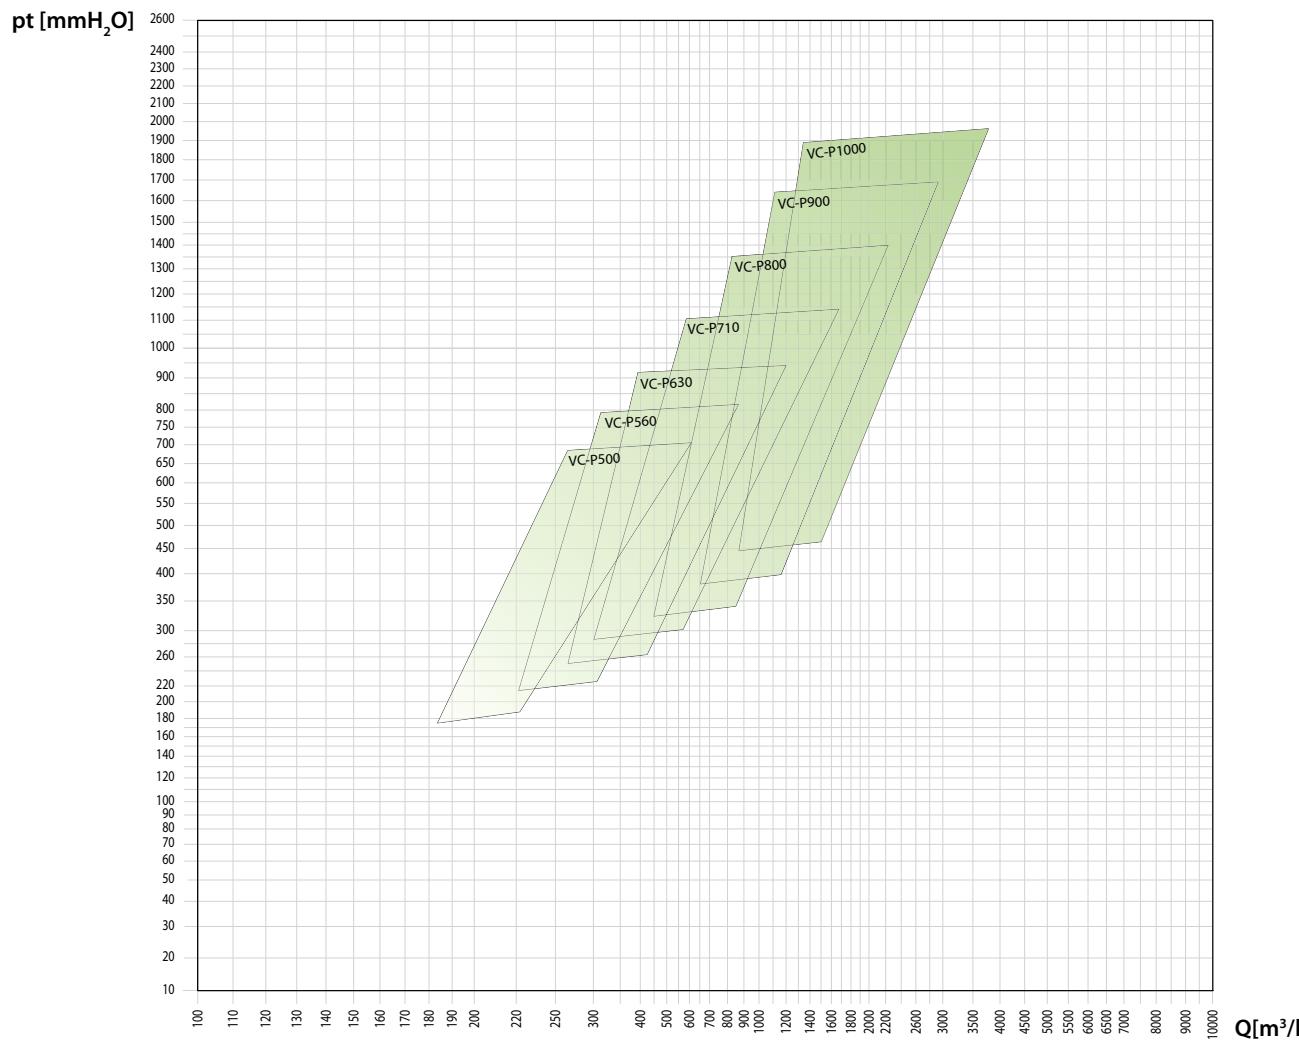

Special applications: See pgs. 2.20 to 2.30.

Fan start-up: The VC/P series fans must be started-up with inlet completely closed. Check the electrical motor manufacturer's data for the effective number of start-ups per hour that the motor is able to sustain; unless otherwise indicated take one start-up per hour to be the maximum.

If it is necessary to start up the fan more frequently and this can be achieved by installing a larger motor.

During start-up the peak current can reach as much as 7 times the nominal current and the electrical components should be scaled appropriately.

Impeller classes: The above table refers to standard operating conditions, in heavy-duty service conditions it is advisable to contact the MORO Customer Service to establish the most suitable type of impeller.

■ Arbeitsbereich: Niedrige Fördermengen. Hohe Drücke.

Schaufelform: positive Kurve, siehe Seite 2.3.

Anwendungen: Zum Transport von Stäuben, zur Trocknung und für mit Überdruck zu beaufschlagende Räume. Zur Verwendung im industriellen Bereich, Giessereien, Nudelfabriken, Öfen und der Chemie geeignet.

Konstruktive Standardausführungen: Ausf. 1-Ausf. 4-Ausf. 5-Ausf. 8-Ausf. 9-Ausf. 12, siehe Seiten 2.5 - 2.6.

Standardtemperatur des Mediums: $-10 \div +60^\circ\text{C}$. Für andere Temperaturen siehe Seiten 1.12 bis 1.15.

Konstruktionsart: Ventilator aus Blech Fe360, Laufrad aus Fe360, statisch und dynamisch ausgewuchtet. Für andere Materialien siehe Seiten 1.12 bis 1.15.

Betriebsdaten: Physikalischer Zustand der Ansaugluft $T = 20^\circ\text{C}$, 0 m ü. M. und $p = 1.205 \text{ kg/m}^3$.

Geräuschpegel: Angegeben als Schalleistungspegel $L_w A$ [dB(A)] mit Messung im Freifeld und an Rohren angeschlossenem Ventilatoren, siehe Seiten 1.43 bis 1.49.

Ausrichtung: 8 Modelle RD (Drehrichtung im Uhrzeigersinn, von Antriebssseite aus gesehen) und 8 Modelle LG. Angeschraubter, in der Ausrichtung veränderbarer Ventilator in den Größen 500-630, mit Vorderstütze und damit nicht veränderbar ab Größe 710 mit Riementrieb, immer ausrichtbar bei allen direkt angetriebenen Ventilatoren ohne Vorderstütze, siehe Seite 2.7.

Spezialausführungen: Siehe Seiten 2.20 bis 2.30.

Ventilator-Anlauf: Für die Ventilatoren der Reihe VC/P muss unbedingt ein Anlauf mit vollständig geschlossener Ansaugseite sichergestellt sein.

Mit den Angaben des Herstellers des Elektromotors die Anzahl der zulässigen Anläufe pro Stunde überprüfen; falls nicht anders angegeben, ist von einem Anlauf pro Stunde auszugehen. Falls häufigere Anläufe vorzusehen sind, kann ein stärkerer Elektromotor eingebaut werden. Während des Anlaufs kann der Anlaufstrom bis zum Siebenfachen des Nennstroms betragen, der elektrische Anschluss ist in geeigneter Weise auszulegen.

Laufradklassen: Die obenstehende Tabelle bezieht sich auf normale Betriebsbedingungen. Bei erschwerenden Betriebsbedingungen wird empfohlen, den Kundenservice der MORO zu kontaktieren, um den am besten geeigneten Laufradtyp zu bestimmen.

■ Campo de trabajo: Caudales bajos. Presiones altas.

Tipo de pala: Curva, positiva, ver pág. 2.3.

Aplicaciones: Para transporte neumático, polvos, desecación y presurización. Apto para el uso en el campo industrial: fundiciones, fábricas de pasta, hornos e industria química.

Variantes constructivas estándares: Ejec. 1-Ejec. 4-Ejec. 5-Ejec. 8-Ejec. 9-Ejec. 12, ver págs. 2.5 - 2.6.

Temperaturas del fluido estándares: De -10 a $+60^\circ\text{C}$. Para otras temperaturas, ver págs. de 1.12 a 1.15.

Tipo de construcción: Ventilador de chapa en Fe360, rotor en Fe360 equilibrado estática y dinámicamente. Para otros materiales, ver págs. de 1.12 a 1.15.

Datos de funcionamiento: Condiciones del aire en aspiración $T=20^\circ\text{C}$, 0 m SNM y $p=1.205 \text{ kg/m}^3$.

Niveles de ruido: Expresados en potencia sonora $L_w A$ [dB(A)] medida en campo abierto con ventilador canalizado, ver págs. de 1.43 a 1.49.

Orientaciones: 8 RD (rotación dextrógira vista desde el lado de transmisión) y 8 LG. Ventilador en versión empernada orientable para tamaños 500-630, con soporte delantero, por lo cual no es orientable a partir del tamaño 710 de transmisión, siempre orientable en ventiladores acoplados directamente sin soporte delantero. Ver pág. 2.7.

Construcciones especiales: Ver págs. de 2.20 a 2.30.

Puesta en marcha del ventilador: Los ventiladores de la serie VC/P deben necesariamente encenderse con la aspiración completamente cerrada. Comprobar a partir de los datos del fabricante del motor eléctrico el número efectivo de encendidos/hora que el motor puede soportar. Considerar un máximo de un encendido/hora, de no indicarse lo contrario.

En caso de que se plantea la necesidad de encender el ventilador con mayor frecuencia, la instalación de un motor de mayor tamaño puede evitar el problema. Durante el encendido, la corriente de arranque puede llegar a ser 7 veces la corriente nominal, por lo tanto, el tamaño y la capacidad de los componentes eléctricos deberán calcularse de acuerdo con ello.

Clases de rotores: La tabla arriba hace referencia a condiciones de trabajo estándares, en condiciones de funcionamiento pesadas, se aconseja llamar al Servicio de atención al cliente de MORO para conocer el tipo de rotor más adecuado.

■ Le niveau de pression sonore pondérée A, LpA (chap. 14), correspond à la valeur relevée dans les conditions d'essai au point de niveau sonore maximum.

■ Der nach A bewertete Schalldruckpegel LpA (Kap. 14) entspricht in den Testbedingungen dem höchsten gemessenen Wert des Geräuschpegels.

■ The A-weighted sound power level, LpA (Chap.14), is the value measured in test conditions at the point of maximum noise level.

■ El nivel de presión sonora ponderado A, LpA (cap. 14), corresponde al valor medido, en las condiciones de prueba, en el punto con máximos niveles de ruido.

VC500P

Technical drawing of a structural component labeled 'B'. The overall width is indicated as 58. A vertical dimension of 270 is shown on the left. An 'Optional' feature is indicated by dashed lines, with a height of 71 and a width of 53. A horizontal dimension of M is shown below the main structure. A vertical dimension H = 560 is shown on the right. A note 'N° 4 Fori Ø' is present near the bottom right. A small detail at the bottom shows a square base with four holes and a height of 270.

The figure consists of two parts. The top part is a technical drawing of a circular component. It features an outer circle with a diameter of 979 mm. Inside it is a smaller circle with a diameter of 443 mm. A central hole has a diameter of 96 mm. The distance from the center of the inner circle to the outer edge is 425 mm. There are four small rectangular cutouts at the bottom. The bottom part is a cross-sectional view of a rectangular frame. It shows a height of 985 mm and a width of 1180 mm. The frame is divided into three vertical sections. The left section has a height of 780 mm and a weight of 3kg. The middle section has a height of 355 mm. The right section has a height of 463 mm and a thickness of 28 mm. There are two horizontal slots at the bottom with a width of 23 mm each.

Es. 4

Es. 1

Il ventilatore in Es. 4 senza supporto anteriore è orientabile, in Es. 1 non è orientabile • Peso in tabella comprensivo di motore

■ Le ventilatori in Ex. 4 sans support frontal est orientable, en Ex. 1 n'est pas orientable.

Le poids dans le tableau inclut le moteur

■ Der Ventilator in Aus. 4, ohne Vorderhalterung, ist drehbar; in Aus. 1 ist nicht drehbar.

Gewichtsangabe in Tabelle inkl. Motor

■ The fan in Ex. 4 without front support is revolvable, in Ex. 1 is not revolvable.

The weight indicated in the table includes motor

■ El ventilador en Ej. 4 sin soporte delantero es orientable, en Ej. 1 no es orientable.

El peso en la tabla incluye el motor
